

PROFESSIONAL SUMMARY:-

- Around 4+ years of experience as DevOps Engineer & Site Reliability Engineer (SRE) supporting cloud-native applications, CI/CD pipelines, infrastructure automation, & highly available production environments serving 500K+ users.
- Strong hands-on experience designing, implementing, & supporting cloud infrastructure on AWS & Azure platforms, achieving 99.95% application availability.
- Expertise in Infrastructure as Code (IaC) using Terraform, AWS CloudFormation, & AWS CDK, reducing manual provisioning efforts by 80%.
- Strong experience building & maintaining CI/CD pipelines using Jenkins, GitHub Actions, CI/CD pipeline, reducing deployment time by 70%.
- Hands-on experience managing Docker containers & Kubernetes clusters supporting 100+ microservices across multiple environments.
- Experience implementing governance standards, tagging strategies, lifecycle policies, & cloud security best practices across AWS environments
- Strong knowledge of SRE practices including SLI/SLO, Error Budgets, SLA monitoring frameworks, incident management, Root Cause Analysis (RCA), MTTR reduction by 45%, & capacity planning.
- Hands-on experience implementing observability solutions using Prometheus, Grafana, Splunk, CloudWatch, Dynatrace, & AWS X-Ray, improving issue detection by 60%.
- Strong understanding of Linux administration, Python automation, cloud security, production-grade deployments.

TECHNICAL SKILLS:-

Cloud Platforms	AWS, Azure, GCP
AWS Services	EC2, EKS, IAM, VPC, Route53, S3, CloudWatch, Lambda, SNS, SQS, RDS, CloudFormation, API Gateway
Containerization & Orchestration	Docker, Kubernetes, Amazon EKS, Helm, Ingress Controllers, RBAC, HPA, Cluster Autoscaler
Infrastructure as Code (IaC)	Terraform, AWS CloudFormation, AWS CDK
CI/CD & DevOps Tools	Jenkins, GitHub Actions, GitLab CI/CD, AWS CodePipeline, Maven, Ansible
Programming & Scripting	Python, Shell Scripting
Monitoring & Observability	Prometheus, Grafana, Splunk, Dynatrace, ELK Stack, CloudWatch, AWS X-Ray
Site Reliability Engineering (SRE)	SLI/SLO, Incident Management, RCA, MTTR, Capacity Planning, SLA Monitoring
Networking	DNS, Route53, VPC, Load Balancers, NAT Gateway, Firewalls
Operating Systems & Methodologies	Linux, Unix, Windows, Agile, Scrum, DevOps, SRE

PROFESSIONAL EXPERIENCE:-

Wipro Technologies – San Jose, CA
Role: SRE | DevOps Engineer

Aug 2024 - Present

Responsibilities:

- Designed & supported highly available AWS infrastructure powering 80+ production workloads with 99.95% platform availability.
- Built & optimized CI/CD pipelines using Jenkins, GitHub Actions, Maven, AWS CodePipeline, reducing deployment time from 40 minutes to under 12 minutes (70% improvement).
- Implemented Infrastructure as Code using Terraform, AWS CloudFormation, & AWS CDK, reducing manual infrastructure provisioning efforts by 80%.
- Managed Amazon EKS clusters supporting 120+ containerized microservices & improved application scalability by 50%.
- Developed reusable Helm charts & implemented Kubernetes RBAC, Network Policies, & Secrets Management, improving security compliance by 35%.
- Established SLI/SLO frameworks and Error Budgets, reducing P1 incidents by 30%.
- Built self-healing and automated remediation workflows, resolving 65% of recurring issues.
- Implemented observability solutions using Prometheus, Grafana, Splunk, CloudWatch, Dynatrace, & AWS X-Ray, reducing incident detection time by 60%.
- Automated infrastructure & operational activities using Python & Shell scripting, eliminating 75% of repetitive manual tasks.
- Implemented blue-green deployments, canary releases, test gates, & automated rollback mechanisms, reducing deployment failures by 40%.
- Supported incident management and on-call operations, reducing MTTR by 45%.
- Optimized cloud resources, reducing infrastructure costs by 20%.

Environment:

AWS, EKS, Terraform, AWS CloudFormation, AWS CDK, Jenkins, GitHub Actions, Docker, Kubernetes, Helm, Python, Prometheus, Grafana, Splunk, Dynatrace, AWS X-Ray, Linux

HCL Technologies – Hyderabad, India
Role: DevOps Engineer

Jan 2021 - May 2023

Responsibilities:

- Supported AWS infrastructure serving 20+ applications & automated provisioning activities using Terraform, reducing environment setup time by 75%.
- Built CI/CD pipelines, accelerating software delivery by 60%.
- Deployed Dockerized applications to Kubernetes, improving consistency by 90%.
- Automated infrastructure operations, reducing manual effort by 65%.
- Enhanced monitoring and alerting, improving incident detection by 50%.
- Configured AWS networking services, achieving 99.9% application uptime.
- Implemented CI/CD quality gates, reducing release defects by 30%.

Environment:

AWS (EC2, IAM, VPC, Route53, S3, CloudWatch), Terraform, Jenkins, Docker, Kubernetes, GitHub, Maven, Ansible, Python, Splunk, Linux, Agile Scrum.
